Phone: 131913

Email: [info@accentblinds.com.au](mailto:info@accentblinds.com.au)

- Place a warranty repair or replacement request

If the goods need to be inspected first, the Customer Service Team will organise this with you.

**What we will do:**

Your goods will be inspected/repaired/replaced as we deem necessary, within a reasonable time. This time may vary, depending on reasons such as parts availability, incorrect fault description etc.

In some circumstances, goods presented for repair may be replaced by refurbished goods of the same type rather than being repaired. Refurbished parts may be used to repair the goods.

If the problem is deemed to be a major failure, a replacement or refund is available to you. If a refund is provided to you, it will be made by the same method of payment that you used to make your purchase. Refunds will normally be processed within 7 days.

There may be circumstances where you are not entitled to a remedy. Where the product is assessed and found that it does not breach the consumer guarantee or the conditions of this warranty, you may be required to pay costs incurred for the assessment.

The product will be returned to you at your original installation address, unless it is being replaced, or it is no longer required / wanted.

## MOTOR CARE LABEL

### To avoid Motor damage

- **Avoid wetting the motor area.**
- **Avoid thermal overload on the motor.**
- **Repetitive use can cause the motor to overheat.**
  - The motor will disable itself for a 15-20 minute cooling period depending on the environment - in the meantime, you should move the switch to the "OFF" position.
- **After the motor has reset itself, it is operational again.**
- **Do not try to fix a malfunction yourself as this may cause damage to the motor.**

Remote - controlled motorised blinds, curtains & awnings are the most convenient and easy to use. If, after time, the motor stops working, the issue is usually electrical. BEFORE calling for assistance, please try the following:

- **Replace the small battery in the remote (hand-held or in-wall).**
- **Check if all the breakers in the breaker box are switched on.**
- **Look for any GFCI or AFCI outlet that has been triggered – these outlets have "Test" and "Reset" button and often just pushing the "Reset" button will work.**
- **If you unplug your motor or have a power surge or failure, you may need to re-set the settings.**
- **Check the internal limit switch on the motor to see if it has moved by a small amount. If this is the case do not operate any further and call for assistance.**
- **In most cases, damage to the limit switch may initially be small and unnoticed, but in time this will become a problem and the limit switch will eventually fail.**
- **Do not try to fix any 'electrical' malfunction yourself as this may cause more damage to the motor.**
